MPhys project report

Project performed in collaboration with James Harbon
Supervisor: Dr Ingo Dierking

April 6, 2021

Abstract

Contents

1	Introduction	1
2	Background principles	1
2.1	Liquid crystals	1
2.2	A brief overview of supervised machine learning	1
2.3	A brief overview of convolutional neural networks	1
3	Summary of previous work	1
4	CNN Models	1
4.1	Sequential	1
4.2	Inception	1
4.3	ResNet	1
5	Methodology	1
5.1	Data preparation	1
5.2	Model training configurations	1
6	Classification tasks and results	1
6.1	Cholesteric and smectic	1
6.2	Smectic A and C	1
6.3	Smectic I and F	1
6.4	Cholesteric, fluid smectic and hexatic smectic	1
6.5	Cholesteric, smectic A, C, and hexatic smectic	1
7	Conclusions	1

1 Introduction

[1]

2 Background principles

2.1 Liquid crystals

2.2 A brief overview of supervised machine learning

2.3 A brief overview of convolutional neural networks

3 Summary of previous work

4 CNN Models

4.1 Sequential

4.2 Inception

4.3 ResNet

5 Methodology

5.1 Data preparation

5.2 Model training configurations

6 Classification tasks and results

6.1 Cholesteric and smectic

6.2 Smectic A and C

6.3 Smectic I and F

6.4 Cholesteric, fluid smectic and hexatic smectic

6.5 Cholesteric, smectic A, C, and hexatic smectic

7 Conclusions
